Installation for IP65:

1. Depending on the wiring condition, drill 1 or 2 holes in the base and install the "cable head".
2. Care should be taken with the dimensions of the cable glands and drilling with the right size bit.
3. Lock the "cable gland" on the well-drilled base.
4. Insert the cable into the "cable gland" to lock the cable.
5. We don't provide the cable gland. If you need, please buy by yourself or from our company.
